

TITLE

Smart Car Showroom Management System

SCOPE

The Smart Car Showroom Management System is designed to fully automate the operations of a modern car showroom. This system will manage customer registrations, vehicle inventory, sales processing, payment and billing, service appointments, warranty management, staff management, payroll, reporting, notifications, and feedback handling. By centralizing these operations, the system aims to improve operational efficiency, reduce human error, enhance customer satisfaction, and provide real-time analytics and reporting. It also supports multi-showroom management and ensures secure data backup and recovery processes.

MODULES
